

In regard to the proposed Power Line Communications method of broadband Internet delivery via electric power companies' transmission lines, so-called PLC or BLC, I wish to formally register to you, the FCC, my protest and desire for this to be voted against. PLC, as a form of Internet delivery via powerlines, will interfere with all communications via radiowaves in the frequency bands from 0kHz to 30MHz. The interference will be of such a massive scale and potent force that receiving any communications via radio apparatuses will be rendered impossible!!! This cannot be allowed as the FCC is legally bound to protect and serve all US citizens and their corporate, governmental, military, public service, and private interests with respect to the radio services that will be subjected to the aforementioned interference. This interference will be of such a grand scale that I and countless tens of millions will have all their FCC-protected interests and usages on LF, MF, and HF radio services rendered compromised and useless. I therefore reiterate that you DO NOT ACCEPT and, if necessary, VOTE AGAINST the proposed PLC/BLC transmission of Internet via power companies' facilities. Thank You for your time. Dean M. Bianco, Licensed Amateur Radio Operator of Station N2JSG.
